

CareerHub

The All-in-One Toolkit for Resumes, ATS Checks & Job Applications

A single website that does for resumes and job applications what iLovePDF did for PDFs — one place, dozens of small, genuinely useful tools, built around the real workflow of a student or jobseeker applying to many jobs.

Field	Detail
Prepared for	Dhanush — Founder / Solo Developer
Document type	Product & Business Concept Note
Primary stack fit	Flutter / Web + Firebase + Browser Extension
Target users	Students, Freshers, Jobseekers, Exam Aspirants

1. The Idea

CareerHub is a single website (plus a companion browser extension) that bundles every small tool a student or jobseeker needs during a job/exam application cycle — resume building, resume fixing, ATS compatibility checking, cover letter generation, format conversion, and most importantly, **automatic form-filling on job and exam portals**. Instead of positioning as "yet another resume builder," it positions as a utility hub, the way iLovePDF is not "a PDF editor" but "the place you go when you have any PDF problem."

The wedge feature — auto-fill — is the one competitors in this space underserve, especially for India-specific portals (Naukri, LinkedIn India, government/bank recruitment forms like IBPS, SSC, state PSCs). That lived, repetitive pain is the strongest go-to-market story.

2. The Problem

Students and jobseekers currently juggle 6-8 different disconnected tools to complete one application cycle:

- **Resume creation** is scattered across Canva, Word templates, and generic builders with paywalls.
- **ATS checking** requires yet another separate tool (Jobscan, resume worded) often paid or limited.
- **Form filling** is manually repeated for every single job/exam application — name, address, education, experience, referees — the same data typed 50+ times across a job search.
- **Format conversion** (resume to PDF, photo resizing to portal specs, signature scanning) is done via random unrelated websites, often with ads, watermarks, or data-privacy concerns.
- **Government/bank exam forms** (SSC, IBPS, PSC) have rigid photo/signature size rules and repetitive personal-detail fields that cause real rejections when done wrong.
- Existing global tools (Zety, Novoresume, Rezi, Kickresume) are resume-only, subscription-heavy, and not tuned to Indian portals or exam-form quirks.

3. The Solution

One website + one browser extension, built around a single reusable **Profile** (structured personal, education, work, and document data) that powers every tool on the platform — so the user enters their details once and reuses them everywhere: resume generation, ATS scoring, cover letters, and most importantly, live auto-filling of external job/exam portal forms.

Core pillars:

- **Build once, reuse everywhere** — a central profile/data vault.
- **Free core utilities, paid power features** — iLovePDF-style freemium funnel.
- **India-first form intelligence** — pre-mapped field logic for Naukri, LinkedIn, IBPS, SSC, and common recruitment PDFs, not just generic autofill.
- **No login-wall for basic tools** — lowers friction so people trust and return before ever paying.

4. Core Features (Website Toolkit)

Tool	What it does
Resume Builder	ATS-safe templates, live preview, section reordering, multiple export formats (PDF/DOCX).
ATS Checker	Score a resume against a job description; keyword gap analysis; formatting-risk flags (tables, images, columns that ATS can't parse).
Resume Fixer / Rewriter	AI rewrites bullet points into achievement-oriented, quantified statements.
Cover Letter Generator	Generates a tailored cover letter from resume + job description.
Resume-to-PDF / DOCX / Image Converter	Format conversion utilities, iLovePDF-style, including photo & signature resizing to exact portal specs (SSC/IBPS/PSU).
Auto-Fill Engine	Browser extension that reads the user's saved Profile and fills job/exam portal forms field-by-field.
LinkedIn / Naukri Profile Sync	Import existing LinkedIn or Naukri data to pre-populate the Profile instantly.
Application Tracker	Kanban-style tracker for applied/interviewing/offer status across companies.
Mock Interview / Q&A; Prep	Role-specific question banks and AI mock interview feedback (later-stage feature).
Exam Form Assistant	Guided flow specifically for government/bank exam forms: photo/signature spec checker + field-by-field fill helper.

5. Auto-Fill Engine — How It Works

This is the differentiating feature, so it deserves its own detailed flow.

Step-by-step flow:

- **Step 1 — Profile creation:** User fills a structured one-time form on CareerHub (personal details, addresses, education history with exact institution/board formats, work experience, documents, photo, signature) — or imports it from an existing resume/LinkedIn.
- **Step 2 — Install extension:** A lightweight Chrome/Edge extension ("CareerHub Autofill") connects to the user's cloud profile via secure login.
- **Step 3 — Field detection:** On supported portals, the extension detects form fields using a combination of pre-built site-specific field maps (for major portals) and a generic heuristic matcher (label text + input type + placeholder matching) for unknown sites.
- **Step 4 — Fill & review:** User clicks "Autofill" — fields populate instantly, but nothing is submitted automatically; user reviews and submits manually. This avoids liability and respects portal terms of service.

- **Step 5 — Learn & save mappings:** If a field isn't recognized, the user can map it manually once; the mapping is remembered for their next visit to that portal.

Priority portals for pre-built field maps:

- Naukri.com, LinkedIn (India job applications), Indeed
- IBPS (PO/Clerk/SO), SSC (CGL/CHSL/MTS), State Public Service Commissions
- Common recruitment PDF-form portals (many govt exams still require downloadable PDF forms — the platform can also auto-fill these using the existing Profile data via the PDF skill/tooling)

Important scope note: fully automatic submission on government portals carries legal/ToS risk and should be avoided; the safe, sustainable version is "fill instantly, human reviews and clicks submit."

6. Browser Extension — Feature Spec

- **Manifest V3 Chrome/Edge extension**, syncs with the CareerHub account via secure token auth.
- **Floating autofill button** injected on recognized job/exam portal pages.
- **Field mapping engine**: JSON-based site profiles (selector → profile field) stored server-side and updated centrally as portals change their forms — no extension update needed for new mappings.
- **Local-first privacy mode**: sensitive fields (Aadhaar/PAN-like IDs, if ever stored) encrypted and never sent to third parties; user can toggle "never autofill sensitive IDs."
- **One-click resume upload** from the same extension on any job portal's upload widget.
- **Usage dashboard**: number of applications autofilled, time saved estimate — a good retention/paid-plan hook.

7. Website & Tech Architecture

Layer	Choice / Notes
Frontend (Web)	React or Flutter Web — component-driven, since resume templates are essentially reusable layout components.
Backend / DB	Firebase (Auth, Firestore, Storage) — matches existing stack; scales fine for MVP and early growth.
Resume rendering	HTML/CSS to PDF pipeline (e.g., headless Chromium / wkhtmltopdf) for pixel-perfect, ATS-safe exports.
ATS Scoring engine	Text-similarity / keyword-matching model (can start rule-based with TF-IDF-like matching, upgrade to embeddings later).
AI features (rewrite, cover letter, mock interview)	LLM API (Gemini Flash — already in your workflow — or similar) for cost-efficient generation.
Browser Extension	Manifest V3, JavaScript/TypeScript, syncs field-map configs from a central server so maps can be updated without republishing the extension.
Field-map management	Admin-side JSON config per portal domain — a small internal tool to add/update selectors as job portals change their HTML.
Payments	Razorpay/UPI-based checkout for Indian pricing; Stripe if expanding globally later.

8. Monetization Model

Tier / Channel	Details
Free	Basic resume builder (limited templates), 1 ATS check/day, manual profile fill on 2 portals/month, format conversion tools.
Pro (one-time or monthly, low price ~₹149-299)	Unlimited ATS checks, all templates, unlimited autofill across all supported portals, cover letter generator, application tracker.
Campus / Bulk license	Colleges/coaching institutes (SSC/IBPS coaching centers) pay per-batch access for their students — a strong India-specific B2B2C channel.
Affiliate / referral	Referral commissions from partnered job portals, courses, or mock-test platforms shown contextually (e.g., after ATS check, suggest a relevant skill course).

A one-time low price or short-term pass ("₹99 for 30 days during active job hunt") tends to convert better than recurring subscriptions in the student/jobseeker segment, since usage is bursty (intense during an active job search, then dormant).

9. Why This Can Work Despite a Crowded Market

- Resume builders are crowded — **auto-fill for Indian portals is not**. That's the real wedge, not the resume tool.
- Bundling under one "utility hub" identity (iLovePDF model) captures search traffic for many small, unrelated-seeming keywords ("resume to pdf", "ats checker free", "ibps po form fill help"), each a low-competition long-tail entry point that funnels into the same product.
- Personal founder story (an active IBPS PO aspirant building the tool he needs) is authentic marketing content for social/community channels (Telegram exam groups, WhatsApp student communities, YouTube exam prep channels) where these audiences already gather.
- Coaching institutes are an underused B2B2C distribution channel most resume-tool competitors ignore.

10. Suggested MVP Scope & Roadmap

Phase	Focus
Phase 1 (MVP)	Resume builder + ATS checker + PDF/format converters + basic Profile. Validate demand, start SEO on long-tail tool keywords.
Phase 2	Browser extension with autofill for 3-5 top portals (Naukri, LinkedIn, IBPS, SSC). This is the differentiation phase.
Phase 3	Cover letter generator, application tracker, exam form photo/signature assistant, coaching-institute bulk licensing.

Phase	Focus
Phase 4	Mock interview prep, expanded portal coverage, possible expansion beyond India.

11. Key Risks to Watch

- **Portal HTML changes** can break field maps — mitigate with server-side config (no extension redeploy needed) and a lightweight community-reporting flow for broken fields.
 - **ToS/legal risk** if the extension is seen as automating submissions — mitigate by always keeping a human-review step before submit, never fully automating government portal submissions.
 - **Data privacy** — resumes and personal data are sensitive; encrypt storage, avoid storing ID numbers unless essential, be explicit about what the extension does and doesn't send anywhere.
 - **Retention** — job search is a bursty, temporary need; combat with the campus/institute channel for steady inflow and a resume-tools SEO funnel that keeps bringing new users.
-

Prepared as a working concept note — intended as a living document to refine as the MVP takes shape.
